

We work with the data you have and show you what you didn't know.

Data analysis, warehousing and modernization guidance for government agencies, led by a principal with 25+ years in data.

PRINCIPAL'S PRIOR RESULTS

\$500K

in duplicate payments found in the first two days of one AP review

6 states

shown which eligible children their programs were missing

2 million

children's records analyzed inside each state's own cloud environment, so the data never left agency control

100M+

customers scored by a credit-offer model built at Amazon

CORE SERVICES

01 "I need help with my data."

Data analysis and enrichment

We consolidate data from any system and analyze it: reconciliation, duplicate payments, audit support, fraud, and funding-gap analysis that shows who qualifies for a program but isn't being served.

02 "Our data is everywhere. What are our options?"

Data warehouse modernization and preparation

Vendor-neutral options and architecture. We prepare data for migration as a subcontractor to larger primes, and handle smaller moves end to end, including repointing existing reports so they keep working.

03 "Is this migration on track, and what does it mean for my program?"

Owner's representative for system migrations

Independent oversight of the integrator's data work on the agency's behalf: readiness reviews, conversion testing, reconciliation, and clear answers on how operations and reports will change.

04 "This tool isn't working for us."

Workflow assessments and playbooks

We map how work and data actually flow today and deliver a sequenced playbook for fixing the process, with options and requirements staff can act on.

05 "How should we be using AI?"

AI readiness and safe adoption

A playbook for using cloud AI safely inside the agency's own environment, such as Azure AI Foundry, plus a small prototype that shows the operational gain.

06 "Our staff need to actually use the new system."

Technical and data training

Hands-on training for staff on new systems and data tools: SQL, Snowflake, Databricks and other cloud data platforms, basic reporting, and practical AI use. Curriculum, delivery and train-the-trainer.

HOW WE WORK

Trusted with sensitive data. Child, family, justice and health records handled under strict controls.

Patient with access. Plans assume data access takes time, so the work moves without it.

Vendor-neutral. No platform partnerships or resale.

Principal-led. The person who scopes the work does the work.
